

MENTORSHIP

REQUIREMENT FORM

EduNeuro

AI-Native Study Orchestration and Learning Platform

Submission to IIT Guwahati Technology Incubation Centre (TIC)

Founder:Sumanta

Entity:EduNeuro

Stage:Open Beta / Pre-Incubation

Document Date:September 2026

Classification:Confidential

This document is submitted in connection with EduNeuro's application for incubation support at IIT Guwahati Technology Incubation Centre. All information contained herein is confidential and intended solely for evaluating the venture.

1. Startup Name

EduNeuro — AI-Native Study Orchestration and Learning Platform

2. Founder

- **Name:** Sumanta
 - **Background:** Student researcher working in Artificial Intelligence
 - **Role:** Founder and primary operator
-

3. Startup Stage

Open Beta / Pre-Incubation. EduNeuro is currently operating in an open beta phase. The core platform is under active development. Early user validation signals are encouraging but product-market fit has not been achieved. The venture has not received external funding, has zero paying users, and is self-funded at the founder level.

4. Brief Description

EduNeuro is developing an AI-native study orchestration platform for competitive examination preparation. The platform's core thesis is that students need not more educational content, but an intelligent system that continuously understands their learning state — their knowledge, gaps, behaviour, and progress — and recommends the most valuable next learning action. The initial market wedge is GATE preparation in India. The platform is designed to generalise across examinations and broader learning contexts once the core orchestration technology is validated.

5. Problem Being Addressed

Students preparing for competitive examinations use multiple disconnected tools for different aspects of preparation. These tools are optimised for individual activities rather than the student's entire learning process. The result is that students know what they studied but cannot confidently answer:

- What should I study next?
- Which weak areas need targeted attention?
- Am I actually improving?
- How does my study behaviour affect outcomes?
- When should I revise?
- Is my study plan working?

EduNeuro addresses this by building a unified, AI-driven system that models the learner continuously and orchestrates the complete preparation journey.

6. Proposed Solution

An AI-native study orchestration platform that integrates learning support, study planning, practice, assessment, focus management, and progress tracking around a longitudinal learner model. The platform

uses AI to reason about the learner's current state and recommend the next best action, with the system becoming more personalised and effective over time as it accumulates learner data.

7. Current Progress

Product Development

- Open beta platform with core capabilities in active development
- GATE syllabus mapping in progress across major branches
- AI tutoring, study planning, practice engine, and analytics modules under development

User Validation

- 500+ sign-ups / expressions of interest
- 50+ current DAU (recent measurement)
- ~400 peak daily users (observed during early launch period)
- 505 website visitors, 3,093 page views (cumulative, early beta)
- 200,000+ organic content reach; 150,000+ organic content views
- 2.6 lakh+ Instagram content views (organic)
- User research conducted via surveys

Operational

- Self-funded at founder level; zero external funding
 - Zero paying users
 - Founder-led development with lean operational model
-

8. Key Challenges

- **Product-market fit validation:** Moving from early traction signals to demonstrable product-market fit requires focused user research, rapid iteration, and structured experimentation.
 - **AI content quality:** Ensuring AI-generated educational content is accurate, pedagogically sound, and examination-aligned requires robust evaluation frameworks.
 - **Learner model design:** Designing a multi-dimensional learner state model that is computationally tractable and genuinely useful requires expertise in learning science, AI systems, and educational product design.
 - **Retention:** Maintaining student engagement over long preparation cycles (6–18 months) requires sustained value delivery and habit-forming design.
 - **Team scaling:** The founder-led model is insufficient for scaling. Recruiting technical, content, and community talent is a priority.
 - **Monetisation:** Pricing strategy and freemium conversion mechanics require careful validation with the target demographic.
 - **Competitive landscape:** Established players have significant brand recognition. EduNeuro must differentiate on system-level value.
 - **Responsible AI deployment:** AI in educational contexts requires careful attention to content accuracy, learner data privacy, transparency, and learning autonomy.
-

9. Mentorship Areas — Overview

EduNeuro requires structured mentorship across six interconnected areas. The sections below are ordered by priority. The highest-priority needs are product-market fit validation, learner modelling / AI architecture, and monetisation / GTM. Remaining areas are important supporting needs.

10. Technical Mentorship

Priority: High

- **Scalable AI architecture:** Guidance on designing AI services that scale from hundreds to thousands of users while managing API costs, latency, and reliability.
 - **Learner modelling systems:** Expertise in multi-dimensional learner state models, including knowledge tracing, mastery estimation, and behavioural pattern recognition.
 - **Recommendation and personalisation:** Building recommendation systems that determine the optimal next learning action for each individual learner.
 - **AI-generated content evaluation:** Frameworks for evaluating accuracy, pedagogical quality, and examination-relevance of AI-generated educational content.
 - **Evaluation and experimentation:** A/B testing and experimentation frameworks to measure the platform's impact on learning outcomes.
 - **Technical scalability:** Infrastructure scaling, database design for longitudinal learner data, and performance optimisation.
 - **Security and data governance:** Privacy-preserving architectures and compliance with data protection regulations.
-

11. Product Mentorship

Priority: High

- **GATE use case definition:** Identifying the strongest, most differentiated use case within GATE preparation — the feature or workflow that creates the most compelling reason for students to adopt the platform.
 - **User experience design:** Designing intuitive, engaging workflows for complex study orchestration. The product must simplify the student's life, not add another tool to manage.
 - **Retention and engagement:** Strategies for maintaining engagement over long preparation cycles (6–18 months). Habit formation, motivation design, and re-engagement mechanics.
 - **Learning outcome measurement:** Defining metrics that credibly measure the platform's impact on learning effectiveness — not just engagement, but actual improvement in test performance and knowledge retention.
 - **Feature prioritisation:** Making disciplined decisions about which features to build first, based on user value and strategic importance.
 - **User research design:** Structuring research programmes that generate actionable insights about student needs and feature preferences.
-

12. Business Mentorship

Priority: High

- **Monetisation validation:** Designing and executing experiments to validate freemium pricing, willingness to pay, price sensitivity, and conversion mechanics.
 - **Customer segmentation:** Identifying distinct user segments within the GATE aspirant population and tailoring product positioning accordingly.
 - **Business model refinement:** Evaluating and refining the subscription model and assessing alternative revenue streams after primary model validation.
 - **Go-to-market strategy:** Developing a structured GTM plan building on the content-driven organic approach.
 - **Institutional partnerships:** Guidance on approaching coaching institutions and student bodies for structured adoption (post product-market fit).
 - **Startup operations:** Lean operations, financial management, accounting practices, and operational infrastructure.
 - **Fundraising readiness:** Pitch development, investor targeting, financial modelling, and term-sheet preparation for pre-seed/seed round.
 - **Legal and compliance:** Entity formation, IP strategy, terms of service, privacy policies, and regulatory compliance.
-

13. Market and GTM Mentorship

Priority: High

- **GATE market understanding:** Insights into the GATE preparation ecosystem — student demographics, coaching landscape, decision-making factors, unmet needs.
 - **Competitive positioning:** Positioning EduNeuro against established players and emerging AI tools. Identifying messaging that resonates.
 - **Customer acquisition strategy:** Scaling the content-driven organic approach, identifying high-impact content formats and distribution channels.
 - **Community building:** Strategies for building a GATE aspirant community around the platform, creating organic advocacy and retention.
 - **Brand development:** Building a credible, trusted brand in edtech, particularly important for AI use in accuracy-critical contexts.
-

14. AI / ML Research Guidance

Priority: High

- **Learning science integration:** Integrating evidence-based principles — spaced repetition, retrieval practice, interleaving, metacognitive scaffolding — into the AI architecture.
- **Adaptive learning models:** State-of-the-art adaptive learning algorithms, knowledge tracing methods, and their application to examination preparation.
- **Student modelling:** Designing learner state models that capture knowledge, behaviour, and affective states to drive personalisation.
- **Educational AI:** Guidance on emerging research in AI for education, including LLM applications, AI tutoring systems, and learning analytics.
- **Experimentation and evaluation:** Research studies to evaluate the platform's impact on learning outcomes, including control group design and causal inference.

- **Reresponsible AI:** Content accuracy assurance, algorithmic transparency, bias detection, and learner autonomy preservation.
 - **Research collaboration:** Opportunities for collaborative research with IIT Guwahati faculty, potentially leading to publications and academic credibility.
-

15. Incubation and Ecosystem Support

Priority: Supporting

- **Mentor matching:** Structured matching across technology, product, business, and research domains.
 - **Peer network:** Community of fellow founders for peer learning and support.
 - **Investor access:** Structured introductions to angel investors, micro-VCs, and edtech/AI-focused funds.
 - **Industry connections:** Access to potential customers and strategic partners.
 - **Research community:** Engagement with IIT Guwahati research groups and faculty, potential student researcher engagement.
 - **Talent pipeline:** Access to IIT Guwahati students and alumni for internships and full-time roles.
 - **Legal and administrative:** Entity formation, IP management, compliance.
 - **Infrastructure:** Co-working space, computing resources, shared services.
 - **Programme structure:** Workshops, masterclasses, pitch sessions, milestone reviews.
 - **Credibility:** IIT Guwahati brand association for customer trust and investor confidence.
-

16. Expected Outcomes from Mentorship

The following outcomes represent EduNeuro's projections and will be refined in consultation with TIC mentors throughout the incubation period:

- **Product-market validation:** Clear evidence of product-market fit or a well-reasoned pivot decision within 6–9 months, supported by structured user research and quantitative engagement metrics.
 - **Technical maturity:** Production-ready platform with validated AI architecture, content quality assurance, and scalable infrastructure.
 - **Monetisation validation:** Validated pricing strategy and freemium conversion model with initial revenue traction.
 - **Team formation:** Founding team expanded to include at minimum a technical co-lead and one dedicated content/resources role.
 - **Fundraising readiness:** Compelling pitch, financial model, and investor pipeline for pre-seed/seed round following or during the latter phase of incubation.
 - **Research output:** At least one collaborative research output (paper, conference submission, or technical report) from learner modelling work.
 - **Community and brand:** Recognised brand within the GATE community and a growing, engaged user base.
 - **Expansion readiness:** Documented plan for JEE/NEET expansion with technical architecture prepared for multi-examination support.
-
